Social Capital and Information Technology Marleen Huysman, Volker Wulf, 2004 A multidisciplinary examination of the interplay between social capital the value derived from social ties and information technology The concept of social capital or the value that can be derived from social ties created by goodwill mutual support shared language common beliefs and a sense of mutual obligation has been applied to a number of fields from sociology to management It is only lately however that researchers in information technology and knowledge management have begun to explore the idea of social capital in relation to their fields This collection of thirteen essays by computer scientists sociologists communication specialists economists and others presents a multidisciplinary look at this particular intersection of information technology and social science and the need to adopt a sociotechnical perspective For the most part the contributors take a positive view of the interplay of social capital knowledge sharing and community building Some essays look at specific instances including the on line and face to face relationships of a community of athletes the building of social capital among Iranian NGOs and the Internet based communities created by the open source movement while others discuss more general ideas of civic and

personal communities The last four essays examine computer applications that augment social capital including topic and member centered communications spaces such as the Expert Finder and the Loops system and virtual repositories of knowledge such as the Answer Garden and Pearls of Wisdom     **Systems, Software and Services Process Improvement**

*Extreme Programming and Agile Processes in Software Engineering* Jutta Eckstein,Hubert Baumeister,2004-05-14 Software development is being revolutionized The heavy weight processes of the 1980s and 1990s are being replaced by light weight so called agile processes Agile processes move the focus of software development back to what really matters running software This is only made possible by accepting that software development is a creative job done by with and for individual human beings For this reason agile software development encourages interaction communication and fun This was the focus of the Fifth International Conference on Extreme P

gramming and Agile Processes in Software Engineering which took place between June 6 and June 10 2004 at the conference center in Garmisch Partenkirchen at the foot of the Bavarian Alps near Munich Germany In this way the conference provided a unique forum for industry and academic professionals to discuss their needs and ideas for incorporating Extreme Programming and Agile Methodologies into their professional life under consideration of the human factor We celebrated this year's conference by reflecting on what we had achieved in the last half decade and we also focused on the challenges we will face in the near future     Realigning Research and Practice in Information Systems Development Nancy L. Russo,Brian Fitzgerald,Janice I. DeGross,2013-06-29 Given the pervasive nature of information technology and information systems in the modern world the design and development of IS and IT are critical issues of concern New research topics continuously emerge in tandem with the latest developments in technology E Business Knowledge Management Business Process

Reengineering for example However when the initial flurry of research abates and the gloss of these areas has diminished somewhat as it inevitably does the enduring core issue remains as to how to develop systems to fully exploit these new areas Both information systems and information technology are interpreted fairly broadly in this book Of particular interest to the editors were research studies that facilitate an understanding of the role and impact of information technology on society organizations and individuals and which strive to improve the design and use of information systems in that context The contributions to the book are categorized into four broad themes First is the core issue of developing information systems in the current environment In this section several fundamental challenges to current assumptions and conventional wisdom in information systems development are posed The second section considers the management of information systems Again the conventional wisdom is challenged The penultimate section focuses on researching information systems Here various issues to do with research methods are surfaced and the use of leading edge research methods in information systems development is pioneered and discussed Finally a section is devoted to understanding information systems This section addresses the perennial challenge in the IS field in relation to the conceptual foundations of the field This volume comprises the proceedings of the Working Conference on Realigning Research and Practice in Information Systems Development The Social and Organizational Perspective which was sponsored by the International Federation for Information Processing IFIP and held in Boise Idaho USA in July 2001 Given the central importance of information systems development in the current age this eclectic book which considers the topic from a rich and varied set of perspectives will be essential reading for researchers and practitioners working in all areas of IS and IT

Socio-informatics Volker Wulf,2018 This book is about how computer systems might be designed to serve their users rather better It deals with how to study the natural behaviour of users to see how computer systems might best help them and how one might also involve them in the design of computer systems that will assist them in their everyday practices
